

SHELF LIFE STATEMENT

Hellberg Safety recommends that all products are stored in their original shipping cartons in clean and humidity-controlled environment where the relative humidity remains below 75% and the ambient temperature is between 10°C and 25°C. It shall not be stored in direct sun light.

Under these conditions, all* products have a shelf life of at least five (5) years from date of manufacture.

Shelf life is based on the date of manufacture. The actual manufacturing date code is marked on each product (or individual packaging) as MM(month)/YY(year). In some cases the manufacturing date is written in a code format, in such case contact Hellberg Safety for decoding.

Hellberg Safety does not warrant the shelf life nor assume any responsibility for such information.

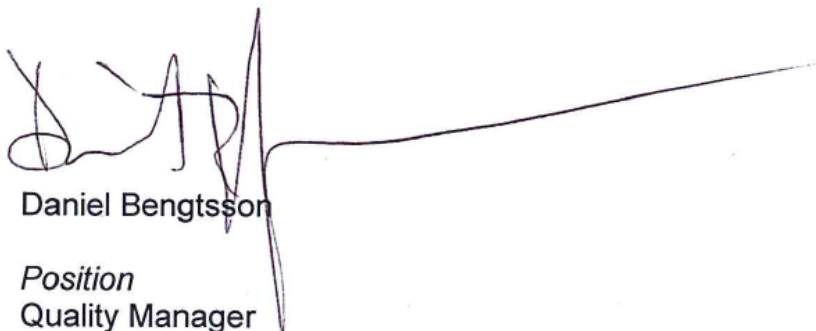

After expiration of the shelf life, or in situations where the product may not have been handled or stored properly, the customer is advised to evaluate the product for conformity with specifications and suitability for the use intended. Although there are exceptions, in many cases if properly handled and stored, the product will remain suitable for use for a significant period beyond the shelf life.

* For products with re-chargeable batteries (built in or replaceable) maximum shelf life is 1 year. Batteries shall always be charged prior to first use
